

Credential provider configuration

Last Modified on 06/02/2019 11:21 am EET

Credential provider settings are stored in Windows Registry in

HKEY_LOCAL_MACHINE\Centero\Agent\Modules\Carillon

1. Usage scenario

Credential provider can be enabled independently in logon / lock workstation screen and in UAC prompt.

Set **Credential provider usage scenario** to

- 0 for logon / lock workstation screen
- 1 for UAC prompt
- 2 for both

2. Activation types

Credential provider can be used with three different activation types. All following settings are DWORD values, where

- 0 disables
- 1 enables

corresponding activation type.

Default (pre-selected) activation type is configured with **Credential provider default activation type** where

- 1 = activation code
- 2 = local account
- 4 = domain account

2.1. Activation code

Credential provider show use activation code

2.2. Run with local account

Credential provider show run with local account

Note: run with local account is always **disabled** in logon screen, regardless of this setting.

2.1. Run with domain account

Credential provider show run with domain account

Note: run with domain account is always **disabled** in logon screen and UAC prompt when "Run as different user..." is used, regardless of this setting.
