

Website settings

Last Modified on 17/04/2020 11:50 am EEST

Agent Gateway Website Settings page is used to specify what IIS website is created or used for Agent Gateway. Because Centro Carillon Portal will be on the same server you need to specify IP address, port or host header that are unique on the server. If you want to use HTTPS, configure HTTPS binding and settings manually from IIS manager after installation. If existing Agent Gateway is being updated then use the same website settings that previous version is using. You can find out the existing website settings from Agent Gateway website IIS management console.

Centro Agent Gateway 1.5.5047.40 (64-bit) - InstallShield Wizard

Centro Agent Gateway Website Settings
Specify web site settings
