

Activation code validity

Last Modified on 17/04/2020 3:52 pm EEST

Activation code validity time specifies the maximum time in which the created activation code must be used on target computer. Available activation code validity settings are configured to ServiceDesk\ActivationCodeValidityTimes.xml file located on the Centero Carillon portal web site.

Items root element

XML file contains Items element where you can specify following settings:

- Autoselect: Setting value to 'false' prevents any item to be automatically selected and therefore user needs select the desired item. If value is 'true' or not specified the item will be automatically selected following these rules:
 - If only one item available to user, it will be automatically selected
 - If multiple items available to user and one the items has 'Selected' set to 'true', it will be automatically selected
 - If multiple items available to user and no item with 'Selected' set to 'true' is available, first item will be automatically selected

Item elements

Item elements represents the available items. You can specify following settings to item elements:

- Value: Actual value when item is selected. Value specifies the activation code validity time in hours. Allowed values are 1 to 72. (required)
- Visible: Setting value to 'false' hides the item. Value can be 'true' (default if nothing specified) or 'false' (optional)
- Selected: Setting value to 'true' automatically selects the item following the rules described in 'Items root element' chapter. (optional)
- Text inside the item element: Specifies the item text shown to user (required)

Example ActivationCodeValidityTimes.xml file:

```
1 hour  
2 hours  
3 hours  
4 hours  
6 hours  
8 hours  
10 hours  
12 hours  
18 hours  
24 hours
```
