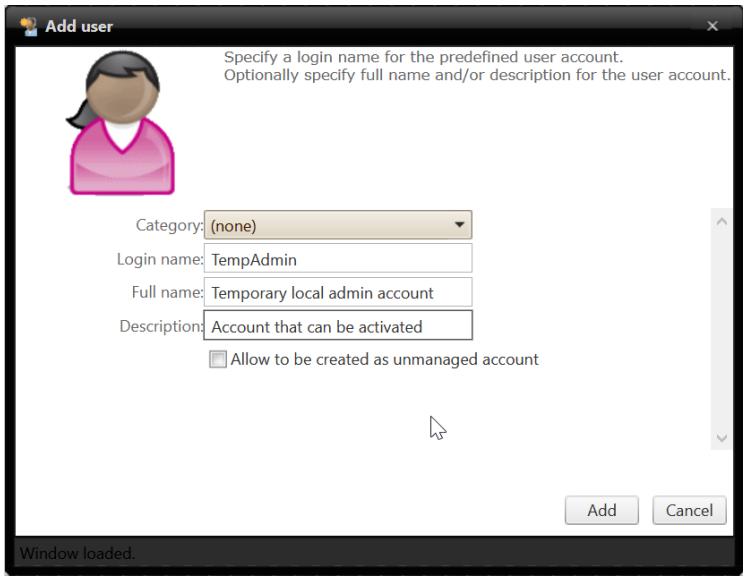
# Create local user

Last Modified on 10/09/2020 1:29 pm EEST

Create a local user that can be managed by creating management rules for the user. Local user will only be created to Centero Carillon database so that you can use the user when creating management rules to control user account on computer(s)



1. Category name

   Select category in which the local user will be created and shown. Category does not affect the local user usage, category selection is purely for organizing local user to make it easier to find when creating management rules.

2. Login name

   Specify login name for the local user account. This will be the actual user account login, for example COMPUTER1\TempAdmin.

3. Full name

   Specify full name for the local user account. If full name is not specified then **Name** is used as full name.

4. Description

   Specify description for the user account if required.

5. Add

   Add new local user. If local user was created the window will be automatically closed.

6. Cancel

   Cancel local user creation and close the window.

7. Allow to be created as unmanaged account

   Select if this local user account can be used in unmanaged account rules. See more information in 'Unmanaged accounts' chapter.
