Modify local user

You can change all local user values on existing groups but only full name and description for built-in local users specified in **System** category.
1. Category name

   Select category in which the local user will be shown. Category does not affect the local user usage, category selection is purely for organizing local user to make it easier to find when creating management rules.

2. Login name

   Specify login name for the local user account. This will be the actual user account login name, for example COMPUTER1\TempAdmin. If name is changed a new local user account will be created to computer(s) that have management rules created for the local user.

3. Full name

   Specify full name for the user. If full name is not specified then **Name** is used as full name.

4. Description

   Specify description for the user account if required.

5. Change

   Modify existing local user. If local user was modified the window will be automatically closed.

6. Cancel

   Cancel local user modification and close the window.
